JULY 2025

Dear members

The General meeting and the Annual General Meeting of the Busnet Computer Club Inc will be held on the **Thursday, 21st August 2025** at the Busselton Senior Citizens Centre 1:30 pm.

All that are able are encouraged to attend to discuss and vote on club administration. The financial report will be presented. An Agenda will be sent closer to the event.

Hopefully we can have a guest speaker in attendance prior to the meeting.

At the AGM the current committee members tenure will cease and an election of new members will take place.

Attached is a nomination form for anyone who wishes to be on the committee or elects to nominate another person.

Positions open are;

President	Vice President	Secretary
Treasurer	and six general committee positions.	

Please come along and support your club.

Afternoon tea will be arranged for after the meeting.

MEMBERSHIP RENEWAL FOR YEAR 2025/2026 CAN BE PAID AT THE AGM
Please refer to my memo for the nomination forms for the above positions.

Thank you, Peter Ralph, treasurer

nbn® speed upgrades are coming – here’s what it means for you!

<https://leaptel.com.au/nbn-speed-upgrades-are-coming-heres-what-it-means-for-you/>

In September, the nbn® network is getting faster. Speeds will increase significantly across key plans – and [new multi-gigabit tiers](#) are being introduced for eligible customers.

What is changing:

If you’re currently on one of our high-speed plans – **Full-Throttle, Turbo Boost or Super Sonic** – and connected via **FTTP** (Fibre to the Premises) or **HFC** (Hybrid Fibre Coaxial), you’ll automatically receive a speed upgrade by the end of September. No action is needed, and your monthly bill will remain the same.

- **Fast (500Mbps/50Mbps)** – Upgrades customers on our current **Full-Throttle (100Mbps/20Mbps)** plan to five times the download speed.
- **Superfast (750Mbps/50Mbps)** – Replaces the current **Turbo Boost (250Mbps/25Mbps)** plan.

Ultrafast (1000Mbps/100Mbps) – Doubles the upload speed of our existing **Super Sonic (1000Mbps/50Mbps)** plan.

Ready to go even faster?

If you’re on our **Pronto (25Mbps/10Mbps)** or **Accelerated (50Mbps/20Mbps)** plans and on **FTTP** or **HFC**, simply switch to one of the existing high-speed plans set to receive the upgrades via your members portal. Your new speeds will kick in automatically by the end of September.

Customers on **FTTN** (Fibre to the Node) or **FTTC** (Fibre to the Curb) may also be eligible for a free upgrade to **FTTP** if you move to one of our existing high-speed plans. If you are an existing customer, you can check your eligibility and request an upgrade directly through your members portal or by entering your address on our website.

What to do if you suspect a scam call

https://www.telstra.com.au/connected/cyber-security-and-safety/protect-yourself-from-scam-calls?adobe_mc=TS%3D1750315481%7CMCMID%3D7472371861781985745874514425222302366%7CMCORID%3D98DC73AE52E13F1E0A490D4C%40AdobeOrg

Follow these steps to protect yourself and learn how Telstra Scam Protect, our free auto-activated security feature helps you recognise and avoid scam calls.

Good phone security is in your hands

We can't prevent every single scam that comes along. But with our new Telstra Scam Protect feature and some common-sense security tips, you'll have a much better chance at identifying and avoiding scam calls on your Telstra mobile service. Let's take a look at:

- Common scam calls and scammer behaviour
- Our new Telstra Scam Protect feature
- Must-know tips for mobile safety
- The cost of scam calls in Australia
- FAQs about Telstra Scam Protect.

Identifying a common scam call

Have you recently received a call from a number you don't know? While it certainly could've been from someone you know, there's also a high chance it could have been a scam call. That's because one in three reported scams happen by phone.

Scammers frequently use phone calls to deceive people, as it's much harder to confirm the caller's identity from their voice.

What do scammers say?

Scammers often pretend to be from a trusted organisation, like your bank - or even Telstra. And they'll try to create a scenario with a sense of urgency so you feel compelled to follow their instructions and hand over your personal information in the process. You might hear something like this:

There's been an unauthorised payment of \$300 from your savings account and we need your bank account details so we can help you reverse this transaction.

But think twice! Shouldn't it be your bank that has your bank account details? Scammers can be very convincing and we know how easy it is to let your guard down.

Telstra Scam Protect

Telstra Scam Protect is a free, auto-activated security feature on your Telstra mobile phone service that alerts you to suspicious incoming calls.

It follows a series of free security features we've launched recently, like [Device Security Essentials](#) and [Scam Indicator](#) to help protect you and your family.

How will I know whether to answer or decline the call?

If a suspected scam call is trying to make its way through, Telstra Scam Protect will send you a message in real time, alerting you to what type of call it could be.

(Continued on next page)

(Continued from previous page)

Telstra Scam Protect is designed to enhance your security by helping you decide when it's better to decline or send an incoming call to voicemail. You can be assured that Telstra Scam Protect won't affect your call experience or quality either.

L-R: Telstra Scam Protect warning messages: Potential Fraud, Suspicious Calling Pattern and Unverified Overseas Call.

The three messages to look out for are:

- **Warning: Potential Fraud:** The call may be fraudulent. This message is applied to calls with spoofed numbers (when a scammer falsifies the number to make it look legitimate so you're tricked into answering it) or suspicious calling patterns.
 - **Warning: Suspicious Calling Pattern:** Indicates a high volume of incoming traffic from a single number. This is associated with potential spam and means you should be cautious.
- Unverified: Overseas Call:** The call appears to be from a local mobile number, but our network detects the call is coming from overseas and may be suspicious. This message will only appear for suspicious calls.

Top tips to avoid scams

'So what else can I do to protect myself from scam calls?', you might ask. While we have some great new security features for your phone and internet, nothing replaces good common sense.

Screen unknown numbers

If you get a call from a number you don't know, it's best to **let it go to voicemail**. And if you're not sure if a caller is who they say they are, it's **ok to hang up**. Also, if you miss a call and feel unsure, the Telstra Scam Protect alert will appear in your missed call log.

Check if the call is real

Never use the contact details given by a caller, written in an email or an SMS. Scammers can easily impersonate someone calling from a major company or organisation.

Fact check: look up the official contact information on the organisation's website or another trusted source.

Don't rush to act

Scammers like to create a sense of urgency. That's why it's so important to **stop and check**.

Ask yourself if you really know who you're communicating with and **never give out any personal information, financial details or remote access to your computer**.

Immediately hang up on anyone who tries to threaten or intimidate you.

Familiarise yourself with the different types of [active phone scams](#) our Cyber Security team has found.

If an offer's too good to be true, it probably is

Always **be sceptical of deals** that seem unusually generous or unrealistic.

It's important to **verify the legitimacy of such offers** by checking the source and doing research more taking any action.

Remember, if something feels off, it's better to **be cautious** and protect yourself from potential scams.

The cost of scam calls

According to Scamwatch (led by the government's [National Anti-Scam Centre](#)), Aussies have reported financial losses of **\$71.9 million AUD** from scam calls since the beginning of 2024. Put another way, this staggering amount makes a mockery of honest hard work, destroys retirement plans and stops much-needed holidays - all because of deceitful behaviour.

The impact of being scammed goes way beyond financial harm. It causes emotional distress, affects mental health and lowers confidence in communication technologies too.

Scam calls can target anyone - from young professionals to retirees, directly exploiting their trust. That's why it's so important to be aware and stay vigilant.

How to Make an Emergency Button That Texts Your Location on Android

https://www.howtogeek.com/how-to-make-an-emergency-button-that-texts-your-location-on-android/?utm_medium=newsletter&utm_campaign=HTG-202506170600&utm_source=HTG-NL&user=cGftZWxhLnNoYW5rczQ0QGdtYWlsLmNvbQ&lctg=9ec3a7490a198b65e8ca4fe6a0c113e4796a52216f21c41cda68047d4a864f1e

On your Android phone, you can make an emergency button that sends your current location to your chosen contact. This lets you get the help you need in an emergency situation. I'll show you how to make that shortcut.

Use Android's Built-In Option to Create the Emergency Button

Many Android phones offer the option to send someone your current location when the emergency mode is triggered. It's likely your phone has this feature, and here's how to use it.

Launch Settings on your phone and select "Safety & Emergency." On the open screen, tap "Emergency Contacts." On the following page, select "Add Contact" and choose the contact you'd like to receive your current location.

There are numerous apps available for language learning on both TV and YouTube.

<https://www.google.com/search?q=there+are+many+apps+to%3Blearn+a+l%C3%A0nguage+on+tv+youtube>

For example, eLang-TV uses video content with smart subtitles and vocabulary features, while Speakit.tv provides courses with listening, reading, and repeating features. [Lingopie](#), a popular app, offers content from TV shows and movies for language practice.

Here's a breakdown of how these apps leverage TV and YouTube for language learning:

Apps Utilizing TV & YouTube Content:

eLang-TV:

This app focuses on learning through video, using smart subtitles that allow users to slow down and focus on specific words or phrases. It also incorporates vocabulary building and interactive games.

Speakit.tv:

Speakit.tv offers courses on Android TV, allowing users to listen to the language, read subtitles, and repeat words and sentences.

Lingopie:

This app provides access to a vast library of TV shows, movies, podcasts, and music videos in various languages. It also features interactive learning tools, such as interactive subtitles, to enhance understanding.

YouTube Channels for Language Learning:

- Numerous YouTube channels offer language learning content, including lessons, tips, and cultural insights. Channels like Multilingual What's App and Innovative Language Learning provide reviews and recommendations for language learning apps and resources.
- Channels like Learn English with EnglishPod101.com and Free Language Learning with LingQ offer a range of lessons and learning materials.

YouTube channels offer free resources like language learning apps, websites, and browser extensions.

Key Considerations for Language Learning Apps:

Content Quality:

Look for apps with well-structured lessons, engaging content, and accurate pronunciation.

Interactive Features:

Apps with interactive elements like quizzes, games, and interactive subtitles can help improve retention and engagement.

Learning Style:

Consider your preferred learning style (visual, auditory, kinesthetic) when choosing an app.

Cost:

Some apps are free, while others offer subscription-based access to premium content and features.

By leveraging the variety of language learning apps and YouTube content available, individuals can find suitable resources to learn languages effectively and enjoyably.

We recommend that most people try more than one app and decide for themselves which one is the best fit for their learning style and preferences.

Nine Underrated Android Features You're Probably Not Using Enough

By Jorge A. Aguilar, 30/6/2025, https://www.howtogeek.com/underrated-android-features-youre-probably-not-using-enough/?utm_source=HTG-NL&utm_medium=newsletter&utm_campaign=HTG-202507010630&user=cGFtZWxhLnNoYW5rczQ0QGdtYWlsLmNvbQ&ictg=9ec3a7490a198b65e8ca4fe6a0c113e4796a52216f21c41cda68047d4a864f1e

Your Android phone is filled with a wealth of features meant to make your life easier and more efficient. However, many of these highly helpful tools often go unnoticed, staying hidden in plain sight, but if you knew how much more convenient your phone could be, you'd be shocked.

If you're not constantly checking out what updates are coming to your phone, you likely missed many free features added with regular updates. Google often adds features to make your life so much easier and quietly adds them in. Some of these features take longer to memorize than others, but they're all worth learning.

Fast App-Switching

Fast app switching is a handy Android feature that many people don't use, but it makes multitasking much easier. You can quickly swipe left or right on the small bar at the bottom of the screen ([called the "gesture pill"](#)) to switch between your most recent apps. If you prefer the classic three-button navigation, just double-tap the "recent apps" button to jump between apps quickly, similar to [pressing Alt+Tab](#) on a computer.

Some advanced gestures even let you peek at open apps so you can compare them before switching. Learning how to use fast app switching can make using multiple apps much more convenient. Instead of closing one app and opening another every time, you can quickly flip between them without losing focus.

Split-Screen Multitasking

[Split-screen multitasking on Android phones](#) makes you much more productive by letting you use two apps at the same time. This feature splits the screen in half so you can see and use two apps next to each other, which means you don't have to keep switching between them. For instance, you can look something up in a web browser while writing notes or watch a video while texting someone.

To turn it on, start by opening the first app you want to use. Then, go to the Recent Apps screen by tapping the square button or swiping up and holding. Next, tap the icon of the app you want to use in split-screen mode and choose "Split screen." The first app will shrink to half the screen, and you can pick a second app to fill the other half. You can also move the divider to make one app bigger or smaller.

Built-in QR-Code Scanner

Android phones come with [a built-in QR code scanner](#), a feature that many people do not notice, even though it is very useful. This built-in scanner lets you scan QR codes quickly and safely without having to download risky third-party apps. [Most newer Android phones](#) (like Samsung, Pixel, and OnePlus models) can automatically recognize and scan QR codes when you open the camera. Just point it at the code, and a link or prompt will show up right away.

You can also use Google Lens, which works through the camera or a widget, to scan QR codes from photos or screenshots you already have. QR codes let you access information fast and without mistakes, whether it's event details, product safety info, or something else. You basically save time by making it easy to get information.

Flip to Shhh

["Flip to Shhh"](#) is a lesser-known Android feature for Google Pixel phones that quietly handles notifications. Unlike Samsung's "Mute with gestures," which only silences active calls and alarms, "Flip to Shhh" turns on Do Not Disturb mode automatically when you place your phone screen down on a flat surface. This stops all calls, messages, and other notifications from making noise.

To turn it on, go to Settings, System, Gestures, and select "Flip to Shhh." Switch it on, and you'll feel a small vibration when Do Not Disturb activates, so you don't have to mess with menus or quick settings. It's perfect for meetings, dinners with family, or anytime you need to focus, letting you silence your phone without making it obvious.

Quick Tap

Quick Tap (also called Back Tap) is a useful but often overlooked Android feature that lets you [set up custom shortcuts by tapping the back of your phone](#). This lets you perform actions quickly without needing to interact with the screen.

If you have a Google Pixel 4a (5G) or a newer model, you can turn on Quick Tap by going to Settings, then System, then Gestures, and selecting Quick Tap to start actions. Samsung Galaxy users can use a similar feature called "Back Tap action" by downloading the "Good Lock" app and the "RegiStar" module from the Samsung Store. Both versions have an option called "Require stronger taps" to avoid accidentally triggering the feature.

(Continued on next page)

(Continued from previous page)

App Pinning

[App Pinning](#) is a rarely used Android feature that locks your phone to just one app, making it extremely useful for privacy and control when you let someone else use your device. It stops others from switching to other apps, going to the home screen, or seeing your personal information until you unpin the app, acting like a digital "lock" for your phone.

To turn it on, go to your phone's Security and privacy settings, then look for More security settings, and find the option labeled "Pin app" or "App pinning." Switch it on and turn on the extra security setting that makes you enter your screen lock PIN or use your fingerprint to unpin the app. After enabling it, open the app you want to pin, go to the Recent Apps screen (by pressing the square button or swiping up and holding), tap the app's icon, and choose "Pin" or "Pin this app."

Guest Mode

[Guest Mode on Android](#) is a useful feature that many people do not notice, but it lets you create a separate profile on your device, which is perfect for when you need to share your phone temporarily. It stops anyone who borrows your phone from seeing your personal files, messages, or photos, keeping your private information safe and under your control.

To turn it on, go to Settings, then Users & Accounts (or a similar option), and switch on "Use Multiple Users." After that, you can switch to the guest profile from the Quick Settings menu. When in Guest Mode, important features like Wi-Fi and Bluetooth still work, and you can choose to allow calls and texts. Guests can even sign in with their own Google Play accounts to download apps, which keeps their information separate from yours.

Live Transcribe

[Live Transcribe](#) provides instant captions for spoken conversations, which is helpful for people with hearing difficulties, for taking notes, or for dictating text. Created in partnership with Gallaudet University, it works with more than 70 languages, identifies background sounds, and keeps conversations private by not saving them. Because it is easy to use and free, it helps a wide range of users communicate more effectively.

If you speak another language or communicate with people who do, it's a great way to get instant translations without needing to deal with Google Translate and spend time making sure you hear them correctly. Overall, it's a great app to have regularly if you are dealing with multiple languages.

Circle to Search

[Circle to Search](#) is a useful Android feature that lets you search for things instantly without leaving the app you are using. It works on newer Pixel and Galaxy phones, turning your device into a handy tool for finding information quickly.

This is great for everyday tasks. When shopping, it helps you find products and compare prices in USD. For learning, it gives you explanations of things you do not recognize. When traveling, it can translate signs or help you identify famous places. It also makes it easy to copy text from pictures or PDFs and scan QR codes on your screen, so you do not have to save them to your gallery. Because it works smoothly inside any app, Circle to Search saves time and simplifies everyday tasks.

To use it, press and hold the Home button or the navigation bar, then circle, highlight, scribble, or tap on any text, image, or video to start a Google search. The results will show up at the bottom of your screen, so you can check details, links, or AI summaries without closing what you are doing. You can also move the search bar to a different spot if you want.

As you can see, your Android phone can do much more than you might think. It comes with many hidden features that

"The reason your phone's camera doesn't work is because your phone doesn't have a camera."

"Our computers are down, our printers aren't working and we're short-staffed. This day couldn't possibly get any worse."

are meant to make your life easier and more organized. Sure, some things like Live Translator don't apply to everyone, but it's still a useful app that you can keep in the back of your mind.

Spend some time trying out these features, and you might find your next favorite thing to do on your phone. In the worst-case scenario, you can feel like a tech genius by showing these features to your friends. Either way, it's great to know the underused features because you can really improve the efficiency of your phone.

Google Workspace or Microsoft Office (365) for Seniors

<https://www.google.com/search?q=microsoft+office+vs+google+suite+for+seniors>

For seniors, Google Workspace may be a better option than Microsoft 365 due to its simpler interface, ease of use, and focus on cloud-based collaboration. However, Microsoft 365 offers more robust features in its desktop applications, which can be beneficial for users who require more advanced functionality.

Microsoft 365

1,024 x 2

Google Workspace:

Simpler interface:

Google Workspace's web-based applications like Docs, Sheets, and Slides are generally considered easier to learn and navigate, making them suitable for seniors who may be less familiar with technology.

Cloud-based:

All files are stored online, which allows for easy access from any device with an internet connection and simplifies sharing and collaboration.

Real-time collaboration:

Multiple users can work on the same document simultaneously, which can be helpful for family members or friends who need to collaborate on projects.

Cost-effective:

Google Workspace offers various pricing plans, including a free option for basic use, which can be appealing for seniors on a fixed income.

Strong security features:

Google Workspace includes features like data loss prevention, AI-based security, and two-step verification to protect user data.

(Continued on next page)

(Continued from previous page)

Microsoft 365:

Familiar interface:

For those already accustomed to Microsoft Office, the transition to Microsoft 365 is relatively seamless.

Powerful desktop applications:

Microsoft Word, Excel, and PowerPoint offer more advanced features and functionality than their Google counterparts, which can be useful for complex tasks.

Offline access:

Microsoft 365 allows users to work on files offline, which can be important when internet connectivity is unreliable.

More storage:

Microsoft 365 provides 1 TB of storage per user, with the option to expand.

Advanced security:

Microsoft 365 offers features like multi-factor authentication and advanced threat detection.

Considerations for Seniors:

Learning curve:

While Google Workspace is generally considered easier to learn, some seniors may still find the transition challenging. Microsoft 365, while more complex, offers familiar tools for those who have used Microsoft Office in the past.

Internet dependency:

Google Workspace relies heavily on internet connectivity, while Microsoft 365 offers offline functionality.

Cost:

Microsoft 365 is generally more expensive than Google Workspace, especially for individuals.

Technical support:

Both platforms offer support, but the level of support and ease of access may vary. Google Workspace's support might be more challenging to access for some users.

Conclusion:

The "best" option depends on individual needs and preferences. For seniors who prioritize simplicity, ease of use, and collaboration, Google Workspace is a strong contender. For those who need more advanced features, offline access, and are comfortable with the Microsoft ecosystem, Microsoft 365 may be a better choice.

Spreadsheets for Seniors

<https://www.google.com/search?q=spreadsheets+for+seniors+australia>

For seniors in Australia looking to manage finances with spreadsheets, Microsoft Excel is a popular choice, but Google Sheets and other free alternatives are also available. Several resources offer guidance and templates, including those focused on budgeting and retirement planning.

Spreadsheet Software Options:

- **Microsoft Excel:** A widely used spreadsheet program with a wide range of features and built-in functions. Books and online resources can help users learn how to use it, including for tasks like budgeting and financial planning.
- **Google Sheets:** A free, cloud-based alternative to Excel, known for its collaboration features.

Other Free Options: LibreOffice Calc and WPS Spreadsheets are other free spreadsheet programs.

Resources for Seniors:

[MoneySMART.gov.au](https://www.moneySMART.gov.au): Offers a free, online budget planner with an Excel version.

- **Amazon Australia:** Provides books like "Excel 2013 and 2010 for Seniors" to guide users through the program.

[Etsy Australia](https://www.etsy.com/au): Sells various retirement and financial planning templates for both Excel and Google Sheets.

[CAP Australia](https://www.cap.gov.au): Offers a free budgeting spreadsheet download.

[Reddit AusFinance](https://www.reddit.com/r/AusFinance): A forum where users discuss budgeting and financial planning, including spreadsheet examples.
